

## RallyCompR Import Procedure 2/9/26

### Overview

1. Setup Waypoints and define radii in Rally Navigator
2. Export to Rally Device - RallyComp
3. Open RallyComp Rally Console
4. In RallyConsole Click Import RC Button and select the .GPX file
5. Waypoints will populate the waypoint Table
6. Check Waypoint Table to see if all waypoints were imported as expected. Waypoint properties can be edited.
7. In the right panel set the desired RallyComp properties. Hovering over the checkboxes will give more info.
8. Click the Write Stage button to write the stage file
9. Copy the file to the root directory of the micro SD chip for the RallyComp
10. Select the Stage on the RallyComp.
11. Go Ride!

**Note: 256MB Micor SD chips work best. Some larger chips have proven unreliable.**

**Use "SD Card Formatter" PC App. to format chips.**
